

EMPLOYEE SPOTLIGHT

CHRIS GRUBER, PMP

Project Controls Analyst

Tell us a little bit about your professional strengths and your role at KKCS.

I currently serve as Project Controls Analyst and Scheduler for Pacific Gas & Electric Company (PG&E) projects, maintaining existing electrical transmission and distribution substations. As a certified Project Management Professional, I enjoy the process of scheduling and forecasting projects in order to evaluate the actual performance of the projects against the team's projections, while identifying areas of improvement.

Which types of projects have you worked on?

Some notable projects that I have worked on includes the maintenance and construction program where KKCS has restored and enhanced electrical substations to improve the reliability of providing power to northern and central California. The work consists of replacing various failed equipment, such as circuit breakers, transformers, relays, bus differentials, fences, lighting equipment, and animal abatement structures.

What has been your experience working at KKCS?

What I enjoy most about working at KKCS is the flexibility provided to help carry out my role. I feel that I am able to construct my own approach that fosters my strengths and motivates me to enjoy my work, while helping to deliver the best quality work I can.
